

# HOW TO PRINT the New UnFacebook Like Stickers

This page of stickers is formatted for **Avery Laser/Ink Jet Multipurpose (Ovals) #6583** readily available in OfficeMax or most office supply stores. The paper stock is matte and it is recommended to set your printer for Ultrapremium Presentation Paper Matte for the most vivid and accurate result. Avery does not make templates usable on a Mac so this document has been formatted in Photoshop to register with the sticker paper. \*Be sure that your printer settings do not scale the document “to fit,” or the artwork will not register properly with the stickers. The scale should be at 100 percent of the original. You may also print on unperforated full sheets and cut the words out as any shape you like. Once the ink is dry, apply stickers in the appropriate style to your child’s homework, your car bumper, an approved client layout, or your own beautiful forehead.
